

ABSTRACT

The project entitled INDUSTRY VISIT & PLANNING System is a specific web based reservation system designed to make it easier for college, School, Institutions to book industrial tour packages online. The most important part of the Industry Visit tour project is that, we can view the details about the industry like available time, days, facilities etc. and register via online and also provide different route to go there. Online register system also provide online payment for entry. The system allows the user to check various travel destinations and choose his destination accordingly, then loads all that data and puts those choices in front of the user. The user can now choose various ways to reach his destination. Thus, this software system automates the working of an online registering system and allows users to book online through this website.
